#### MESSAGE

Agriculture and allied sector is the cornerstone of Indian economy, being watched keenly by not only the policy makers but also by business and industry, and the academia. The Directorate of Economics and Statistics caters to this demand by annually publishing "Agricultural Statistics at a Glance". Over the years, this publication has become a trusted source of reference to people and organizations dealing with agricultural economy.

It gives me immense pleasure to see that the Directorate has continuously endeavored to increase the relevance of this publication by adding information on new areas of concern and relevance for the agriculture sector. This issue includes the updated information on recent initiatives by the Government, viz., coverage under Soil Health Card, Pradhan Mantri Fasal Bima Yojana (PMFBY), Micro Irrigation, etc. This publication is also being simultaneously released electronically on the website of the Department of Agriculture, Cooperation and Farmers Welfare www.agricoop.nic.in and http://eands.dacnet.nic

I compliment Shri P.C. Bodh, Adviser, Ms. Swati Singla, Assistant Economic Adviser, Shri Ashutosh Sharma, Economic Officer and their team members for their efforts in bringing out this volume.

I am sure that this issue will be found useful by one and all.

Seletanayou (S.K. Pattanayak)

#### **FOREWORD**

The Directorate of Economics and Statistics brings out its flagship publication "Agricultural Statistics at a Glance" every year. The publication is widely used as a trusted source of information on various aspects of agriculture and allied sector, including crop production and productivity, growth and investment in agriculture, minimum support price, cost of production, terms of trade, imports and exports, land-use statistics, agricultural inputs, rainfall distribution, etc.

The wide coverage of data in a single book makes it a much sought after and valued publication. The publication will be of immense use to policy makers, farmers, researchers, scientists, administrators, trade, industry, statisticians, economists and the general public. I am sure that this new edition will be appreciated for its rich content, up-to-date coverage of data on the agriculture and allied sectors.

#### **PREFACE**

The Directorate of Economics and Statistics, an attached office of the Department of Agriculture, Cooperation & Farmers Welfare, has been entrusted with an important task of collating and analyzing data on various aspects of Indian agriculture with a view to assist in policy formulation. Its annual flagship publication "Agricultural Statistics at a Glance" is a rich source of data on a wide range of parameters, such as area, production and productivity of various crops across States, land-use statistics, price support and procurement, international trade, credit and insurance.

This issue of the publication has been enriched with latest available information on above aspects and other useful information on emerging areas in agriculture sector. For wider accessibility, a soft copy of the publication has also been uploaded at our website: www.agricoop.nic.in & http://eands.dacnet.nic.in/.

I am grateful to the various contributing Ministries/ Departments/ Organizations for providing us with the updated material for the publication. I also record my gratitude to all the officers of the Directorate of Economics and Statistics, particularly Shri P.C. Bodh, Adviser and his team for their efforts in bringing out this enriched volume. I look forward to comments and suggestions for improvement.

## 1

## Methodology of Crop Estimation

#### 1.1 Introduction

The Directorate of Economics and Statistics (DES) releases estimates of area, production and yield in respect of principal crops of food grains, oilseeds, sugarcane, fibers and important commercial and horticulture crops. These crops together account for nearly 80 per cent of agricultural output. The estimates of crop production are obtained by multiplication of area estimates by corresponding yield estimates. The estimates of area and yield rates assume prime importance in the entire gamut of agricultural statistics.

#### 1.2 Area Statistics

From the point of view of collection of area statistics, the States in the country are divided into three broad categories. The first category covers States and UTs which are cadastrally surveyed and the area and land use statistics are built up as a part of the land records maintained by the revenue agencies, these states are called "Land Record States" or temporarily settled states. This system is followed in 18 major states of Andhra Pradesh, Assam (excluding hilly districts), Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Madhya Pradesh, Maharashtra, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh and Uttarakhand and 4 UTs of Chandigarh, Delhi, Dadra & Nagar Haveli and Puducherry. These States/UTs account for

about 86% of reporting area and are covered under Timely Reporting Scheme (TRS) under which 20% villages are selected at random for complete area enumeration.

The second category includes those States where area statistics are collected on the basis of sample surveys conducted under the scheme of Establishment of an Agency for Reporting of Agricultural Statistics (EARAS). This scheme was introduced in Kerala, Odisha and West Bengal, and later extended to Arunachal Pradesh, Nagaland, Sikkim and Tripura. The scheme envisages, inter-alia, estimation of area through sample surveys in a sufficiently large sample of 20% villages/investigator zones. These states account for about 9% of reporting area.

The third category covers the hilly districts of Assam, the rest of North-Eastern states (other than Arunachal Pradesh, Nagaland, Tripura and Sikkim), Goa, UTs of Andaman & Nicobar Islands, Daman & Diu and Lakshadweep where no reporting agency had been functioning. In this category of states, work of collection of Agricultural Statistics is entrusted with the village headmen. The area statistics in these states are based on impressionistic approach. These areas/ states account for 5% of the reporting area.

#### 1.3 Yield Estimates

The second most important component of production statistics is yield rates. The yield estimates of major crops are obtained through analysis of Crop Cutting Experiments (CCE) conducted under scientifically designed General Crop Estimation Surveys (GCES). At present over 95% of the production of foodgrains is estimated on the basis of yield rates obtained from the CCEs. Field Operations Divisions (FOD) of the National Sample Survey Organization (NSSO) has been providing technical guidance to the States and Union territories for organizing and conducting Crop Estimation Surveys for estimating yield rates of principal crops. In addition, NSSO in collaboration with States/Union Territories implements sample check programmes on area enumeration work, area aggregation and conduct of crop cutting experiments under the Scheme for Improvement of Crop Statistics (ICS). While executing the programme of sample checks on crop cutting experiments, the FOD associates itself with the operational aspects of the conduct of crop cutting experiments right from selection of sample villages, training of field staff to the supervision of field work, and in the process gathers micro level information relating to conduct of crop cutting experiments for estimation of crop yield. The results of Crop Estimation Surveys are analyzed and annual publication entitled "Consolidated Results of Crop Estimation Surveys on Principal Crops" is brought out by the NSSO regularly.

The primary objective of GCES is to obtain fairly reliable estimates of average yield of principal food and non-food crops for States and UTs which

are important from the point of view of crop production. The estimates of yield rates thus arrived at are generally adopted for the purposes of planning, policy formulation and implementation. The CCEs consist of identification and marking of experimental plots of a specified size and shape in a selected field on the principle of random sampling, harvesting and threshing the produce and recording of the harvested produce for determining the percentage recovery of dry grains or the marketable form of the produce.

## 1.4 Coverage

## 1.5 Sampling Design

4

Stratified multi-stage random sampling design is generally adopted for carrying out GCES with tehsils/ taluks/ revenue inspector circles/ CD blocks/ anchals, etc., as strata, revenue villages within a stratum as first stage unit of sampling, survey numbers/fields within each selected village as sampling unit at the second stage and experimental plot of a specified shape and size as the ultimate unit of sampling as depicted in Figure 1.1.

Figure 1.1: Sampling Design for GCES

In each selected primary unit, generally 2 survey numbers/fields growing the experimental crop are selected for conducting CCE. Generally, 80-120 experiments are selected in a major crop growing district, where a district is considered as major for a given crop if the area under the crop in the district exceeds 80,000 hectares or lies between 40,000 and 80,000 hectares but exceeds the average area per district in the State. Otherwise, the district is considered as minor for a given crop. Experiments in minor districts are so adjusted that the precision of the estimates is fairly high and the workload on the field staff is manageable. On an average, about 44 or 46 experiments are planned in a minor district. The number of experiments allotted to a district is distributed among the strata within the district roughly in proportion to the area under the crop in the stratum.

## 1.6 Advance Estimates of Area and Production

The period of an agricultural crop year is from July to June, during which various farm operations from preparation of seed bed, nursery, sowing, transplanting various inter-culture operations, harvesting, threshing etc. are carried out. Different crops are grown during the agricultural seasons in a crop year.

Final estimates of production based on complete enumeration of area and yield through crop cutting experiments become available much after the crops are actually harvested. However, the Government requires advance estimates of production for taking various policy decisions relating to pricing, marketing,

export/import, distribution, etc. Considering the genuine requirement of crop estimates much before the crops are harvested for various policy purposes, a time schedule of releasing the advance estimates has been evolved. These estimates of crops are prepared and released at four points of time during a year as enumerated below.

#### 1.7 First Advance Estimates

The first advance estimates of area and production of kharif crops are prepared in September every year, when south-west monsoon season is about to be over and kharif crops are at an advanced stage of maturity. The assessment is made by the State Governments based on the reports from the field offices of the State Department of Agriculture. They are mainly guided by visual observations. These are validated on the basis of inputs from the proceedings of Crop Weather Watch Group (CWWG) meetings, and other feedback such as relevant availability of water in major reservoirs, availability/supply of important inputs including credit to farmers, rainfall, temperature, irrigation etc.

#### 1.8 Second Advance Estimates

The second advance estimates are made in the month of January every year. The advance estimates of kharif crops may undergo a revision in the light of flow of more precise information from the State Governments. The Second Advance Estimates then cover the second assessment in respect of kharif Crops and the first assessment in respect of Rabi Crops.

#### 1.9 Third Advance Estimates

The third advance estimates are prepared towards the end of March/ beginning of April every year. The earlier advance estimates of both kharif and rabi seasons are firmed up/ validated with the information available with State Agricultural Statistical Authorities (SASAs), remote sensing data, available with Space Application Centre, Ahmedabad as well as the proceedings of CWWG.

#### 1.10 Fourth Advance Estimates

The fourth advance estimates are prepared in the month of June/July every year. Since most of the rabi crops get harvested by the end of May, SASAs are in a position to supply the estimates of both kharif and rabi seasons as well as likely assessment of summer crops. Like the third advance estimates, the fourth advance estimates are duly validated with the information available from other sources.

### 1.11 Final Estimates

Under the existing system of crop estimation, the fourth advance estimates are

followed by final estimates in December / January of the following agricultural year. The main factors contributing to the relatively large number of crop estimates are the large variations in crop seasons across the country and the resulting delay in the compilation of yield estimates based on crop cutting experiments. As agriculture is a State subject, Central Government depends upon State Governments for accuracy of these estimates. For this purpose, State Governments have setup High Level Coordination Committees (HLCC) comprising, inter-alia, senior officers from the Departments of Agriculture, Economics & Statistics, Land Records and NSSO (FOD), IASRI, DES from Central Government for sorting out problems in preparation of these estimates in a timely and orderly manner.

# 1.12 Forecasting Agricultural output using Space, Agro-meteorology and Land based observations (FASAL)

The FASAL scheme was approved as a central sector plan scheme of Directorate of Economics & Statistics, DAC&FW and is in operation since August 2006. The scope of work of the FASAL scheme involved developing Econometric, Agromet and Remote Sensing based models to generate crop forecast at National, State and District level. Multiple forecast of 11 major crops namely Rice (Kharif & Rabi), Jowar (Kharif & Rabi), Maize, Bajra, Jute, Ragi, Cotton, Sugarcane, Groundnut (Kharif & Rabi), Rapeseed & Mustard and Wheat were envisaged at National/State/District level depending on the status of technology available. However, based on the technology feasibility and the requirement, the 11 crops are changed to Rice (Kharif & Rabi), Jowar(Rabi), Maize (Rabi), Soybean, Jute, Pulses (Rabi), Cotton, Sugarcane and Groundnut(Rabi), Rapeseed & Mustard and Wheat.

In order to give further impetus to use Remote Sensing (RS) in Agriculture, implementation strategy of the FASAL scheme was revised in March, 2011. The revised strategy, inter-alia, envisaged transfer of existing operational crop forecast and drought assessment Remote Sensing methodologies developed by Indian Space Research Organization (ISRO) to a new centre to be created in the DAC&FW itself allowing ISRO to focus on R&D on the RS methodology for remaining crops and fine tuning of the existing RS methodologies on crop and drought assessment. In pursuance of the decisions contained in the approved SFC Memo of the FASAL scheme, a new centre, Mahalanobis National Crop Forecast Centre (MNCFC) has commenced operationalizing the Remote Sensing methodology transferred from ISRO. The main objective of the Centre is to prepare multiple-in-season crop forecast and assessment of drought situation using state of the art techniques and methodologies for selected major crops.

## Physical Performance of FASAL scheme:

The project successfully provided National/State/District level forecast of Wheat, Rice (Kharif and Rabi), Jute, Sugarcane, Cotton, Rapeseed/mustard, Wheat and Rabi sorghum in their major growing regions, in the country. Forecast based on Agromet models are being received at State/District level. These forecasts are utilized for validation of advance estimates released by DES / DAC&FW.

The funds are released to the implementing agencies viz (i) Space Applications Centre, Ahmedabad (for developing / fine tuning of RS methodology), (ii) India Meteorological Department, Delhi (Agromet component) and (iii) Institute of Economic Growth (Econometric models) in 2/3 installments every year. The physical and financial progress is received from each of the implementing agencies after release of each installment.

## Financial Outlay of FASAL scheme

An amount of Rs. 12.19 crore has been approved as RE for the F.Y. 2017-18 under the FASAL scheme. So far, the expenditure under the FASAL scheme has been 9.53 crore (till 28.02.2018).

## ERFS Project

Besides, Extended Range Forecast System (ERFS) Project is being implemented since 2007 with the objective of forecasting rainfall and air temperature at district level on monthly scale. For the implementation of ERFS Project, funds are released to IIT Bhubaneswar.

Notes: 1. For 2001, figures include estimated figures for those of the three sub-divisions viz. Mao Maram, Paomata and Purul of Senapati district of Manipur as census results of

2001 Census in these three sub-divisions were cancelled due to technical and administrative reasons.

<sup>2.</sup> The 1991 Census could not be held owing to disturbed conditions prevailing in Jammu & Kashmir. Hence the population figures for 1991 of Jammu & Kashmir have been worked out by 'interpolation'. The data on workers in Col. 5-7 exclude J&K.

<sup>3.</sup> The 1981 census could not be held in Assam. The figures for 1981 for Assam have been worked out by interpolation. The data on workers in Col. 5-7 exclude Assam.

<sup>4.</sup> Figures within parentheses in Col.-4 are percentages to the Total Population.

<sup>5.</sup> Figures within parentheses in Col.-6 and 7 are percentages to Col.-8.

<sup>6.</sup> Figures within parentheses in Col.-8 is percentage share of Agricultural Workers in Total Workers.

P-Provisional figures is based on 4th Advance Estimates of production for 2016-17.

Note:- The net availability of foodgrains is estimated to be Gross Production (-) seed, feed & wastage, , (-) exports (+) imports(+/-) change in stocks.

The net availability of foodgrains divided by the population estimates for a particular year indicate per capita availability of foodgrains in terms of kg/year. Net availability, thus worked out further divided by the number of days in a year i.e., 365 days gives us net availability of foodgrains in terms of grams/ day.

Figures in respect of per capita net availability given above are not strictly representative of actual level of consumption in the country especially as they do not take in to account any change in stocks in possession of traders, producers and consumers.

Foodgrains includes rice, wheat, other cereals and all pulses

P- Provisional figures is based on 4th Advance Estimates of production for 2016-17.

Note:- The net availability of foodgrains is estimated to be Gross Production

(-) seed, feed & wastage, (-) exports (+) imports, (+/-) change in stocks.

The net availability of foodgrains divided by the population estimates for a particular year indicate per capita availability of foodgrains in terms of kg/year.

Net availability, thus worked out further divided by the number of days in a year I.e., 365 days gives us net availability of foodgrains in terms of grams / day.

Figures in respect of per capita net availability given above are not strictly representative of actual level of consumption in the country especially as they do not take into account any change in stocks in possession of traders, producers and consumers.

Foodgrains includes rice, wheat, other cereals and all pulses

Note:

- a: Includes Groundnut Oil, Rapeseed and Mustard Oil, Sesamum Oil, Nigerseed Oil, Soyabean Oil and Sunflower Oil but excludes oil for manufacture of Vanaspati.
- b: Relates to calendar year.
- Relates to actual releases for domestic consumption.
- The data of cloth; prior to 1980-81 is calendar year wise, in meters up to 1984-85 and square meter from 1985-86 onwards.
- e: Figures for blended/mixed fabrics were not separately available prior to 1969. These have been included under man-made fibre fabrics after 1969.
- Figures upto 1971-72 relate to coffee season and thereafter on calendar year basis. The figures for 1972-73 correspond to 1973 and so on.

1: Percentages worked out over Reported Area.

2: In 2009-10 there is significant decline in Total Cropped Area and Net Area Sown due to decline in net area sown in the States of Andhra Pradesh, Bihar, Jharkhand, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. This was mainly due to deficient rainfall.

P: Provisional

<sup>\*</sup> Cropping Intensity is percentage of the gross cropped area to the net area sown.

Note:

- 1. The actual limits for lands in Karnataka and Uttar Pradesh are higher due to classification of land.
- 2. The actual ceiling limits in Himachal Pradesh and Rajasthan are higher due to hilly terrain and desert
- 3. 1 Acre = 0.404686 Hectare.

## Rainfall Scenario and Management of Natural Disasters

#### 20.1: Rainfall Status

Rainfall in 2017 (January – December, 2017)

In 2017, the rainfall (January to December, 2017) over the country as a whole was 94% of Long Period Average (LPA). Out of 36 meteorological subdivisions, 29 received excess/normal rainfall and 07 received deficient rainfall. Season wise rainfall distribution over the country as a whole was as follows:

Winter (January to February 2017): 95% of LPA
Pre-monsoon (March to May 2017): 98% of LPA
Monsoon (June to September 2017): 95% of LPA
Post-Monsoon (October to December 2017): 89% of LPA

#### Season-wise Performance

Winter Season (January – February 2017)

During the winter season rainfall activity over the country as a whole was 95% of the LPA rainfall. At met sub-division level, 05 subdivisions received large excess/ excess rainfall, 05 subdivisions received normal rainfall, 08 received deficient, 12 received large deficient rainfall and 06 received no rainfall out of 36 met subdivisions.

#### Pre-Monsoon Season (March – May 2017)

Rainfall activity during the Pre-monsoon season over the country as a whole was recorded normal at 98% of LPA rainfall. Out of 36 meteorological sub-divisions, 05 received large excess/excess rainfall, 13 received normal rainfall, 15 received deficient rainfall and 03 met sub-divisions received large deficient rainfall.

#### Monsoon Season (June – September 2017)

During the monsoon season for the country as a whole, rainfall was 95% of its Long Period Average (LPA). Seasonal rainfall was 90% of LPA over Northwest India, 94% of its LPA over Central India, 96% of its LPA over East and Northeast (NE) India and equal to LPA in south Peninsula. At met sub-division level, out of 36 met sub-divisions, 05 met sub-divisions received excess rainfall, 25 subdivisions received normal rainfall and 06 sub-divisions received deficient rainfall. Excess/normal rainfall sub-divisions covered 83% of the geographical area of the country. Out of 630 districts for which rainfall data were available, 23 districts (4%) received large excess rainfall, 79 districts (12%) received excess rainfall, 313 districts (50%) normal rainfall, 207 districts (33%) deficient rainfall and 08 districts (1%) received large deficient rainfall.

#### Post-Monsoon Season (October - December 2017)

Rainfall activity during the Post-monsoon season for the country as a whole was recorded deficit rainfall with 89% of LPA. Out of 36 meteorological subdivisions, 05 subdivisions received large excess/excess rainfall, 14 received normal rainfall 08 received deficient rainfall and 09 met sub-divisions received large deficient rainfall.

# Appendices

## Appendix-I

**Explanatory Note** 

#### Advance Estimates

The estimates of area, production and yield rates for 2016-17 are "Advance Estimates" as on 16-08-2017 and are based on deliberations held in weekly inter-disciplinary meetings of Crop Weather Watch Group, availability of water in important reservoirs in the country, availability/supply of important inputs including credit to farmers community, feedback received from states etc. These estimates are "advance" in the sense that these have been prepared in advance of availability of results of CCE (Crop Cutting Experiments) and are subject to revision as more precise information flows from states to DES.

#### Yield

Yield rate is defined as production per unit of area. However, yield rates of various crops given in this publication may not exactly tally with the ratio of production to the corresponding area because figures of area and production of various crops have been generally rounded off in ten thousands.

# **Principal Crops**

Principal Crops as referred to in this publication include only those crops which are covered for preparation of index numbers. The details of these crops are given in Appendix II.

# Estimation Procedure for Non-Availability of Data for 2016-17

The index numbers of area, production and yield rate for 2016-17 (from where growth rates have been derived) are based on advance estimates of principal crops as on 16-08-2017. However, there are a number of 'non-forecast' crops such as plantation crops and spices for which no advance estimates for 2016-17 (or for that matter any year) are prepared. In such cases, the estimates of area and production for the previous years are repeated for the purpose of index numbers.

#### Nine Oilseeds

Wherever "Nine oilseeds" is mentioned in this publication, it includes Castor seed, Groundnut, Linseed, Nigerseed, Safflower, Sesamum, Soyabean, Sunflower and Rapeseed & Mustard.

#### **Total Oilseeds**

Total oilseeds include cottonseed and coconut besides nine oilseeds mentioned in the above paragraph.

## Net Availability of Foodgrains

The Net availability of foodgrains is defined as, where

NAF = GP - SFW - e + i + s

NAF = Net availability of Foodgrains

GP = Gross Production of Foodgrains

SFW = Seed, feed and wastages of Foodgrains

e = Exports of Foodgrains

i = Imports of Foodgrains

s = Change in Stocks of Foodgrains

To work out per capita net availability of foodgrains in terms of kg. per year, NAF is divided by the estimated population for a particular year. When this is further divided by the number of days in a year i.e. 365 days, it gives net availability of foodgrains per day.

# Appendix-II

Methodology of Index Numbers of Area, Production and Yield

#### **Base Year**

The Directorate of Economics and Statistics (DES) had adopted Triennium Ending (T.E.) 1981-82 as base year for the purpose of Index Numbers of Area, Production and Yield in Agriculture until 1999-2000. In 2000-2001, it was decided to adopt T.E. 1993-94 as a way of updating the base to a recent year and keep it in harmony with the other series of indices such as Index of Industrial Production, Wholesale Price Index and the series of National Accounts Statistics. Since area and production in agriculture can fluctuate a great deal from year to year, the average of area/production over the TE 1993-94 was taken as the base year.

It was observed that the base year 1993-94 currently in use for construction of index numbers of Area, Production and Yield of crops has become outdated and stressed on the need for updating of the base year at regular intervals preferably in consonance with the base year revisions of other important indices.

As the period 2005-06 to 2007-08 remained normal from agriculture point of view and the price data available with CSO was for the year 2006-07 which could be used as mid period price for assessment of contribution in value terms for preparation of weighting diagram, it has been considered appropriate to take more recent base, i.e., (TE 2007-08 = 100) as the base for agricultural indices.

### Weighting Diagram

The weight of a commodity for the production index is taken as the average production of the commodity in the TE 2007-08 and the national average price of the commodity during 2006-07 as obtained from the National Accounts Statistics. This has been done to fix the base production at its average level by eliminating the cyclical variation and to evaluate the production with the same price for all states in view of wide variations observed in the state prices.

## Methodology

(c) Index number of yield

- the area under ith crop in the jth year. Let - the area under ith crop in base year period. - production of ith crop in the jth year. - production of ith crop in base year period. - weight of ith crop.

For the the year j, individual crop indices are calculated as below:

(a) Index number of area 
$$= \underbrace{a_{ij}}_{a_{io}} \quad X \quad 100 = IA_{ij}$$
 Index number of production 
$$= P_{ij} \quad X \quad 100 = IP_{ij}$$
 (c) Index number of yield 
$$= \underbrace{IP_{ij}}_{IA_{ij}} \quad X \quad 100$$

For any sub-group G of commodities, the indices for the year j are calculated as below:

a) Index number of area 
$$= \underbrace{\sum wi \ IA}_{i} \underbrace{i \in G}_{\sum wi}.$$
 
$$\underbrace{i \in G}_{i}$$
 b) Index number of production 
$$= \underbrace{\sum wi \ IP}_{i} \underbrace{i \in G}_{\sum wi}.$$
 
$$\underbrace{\sum wi}_{i \in G}.$$

Index number of production X 100 c) Index number of yield =Index number of area
